<p>Investment Strategy</p>	<p>Equity Investment Strategy:</p> <p>The fund will invest in stocks of companies that have sustainable business models and are run by management who have proved their prowess in running these companies over business cycles and have respected the rights of minority shareholders. These will include those companies, the businesses of which tend to earn higher return on capital and have a propensity to generate free cash flows.</p> <p>The benchmark of the scheme is S&P BSE 100 index, which is a broad index designed to measure the performance of the top 100 companies in India that are listed on BSE Ltd., based on size and liquidity.</p> <p>It is an appropriate benchmark as it is designed to capture the movement of the relevant segment of the stock market, where the scheme will be focusing its investments.</p> <p>The Scheme will invest not less than 75% of its assets in companies which have a market capitalization similar to that of the benchmark of the scheme i.e. S&P BSE 100 index.</p> <p>A bottom-up fundamental approach will be used for identifying such companies. Our process would be agnostic to the industries in which these companies operate/ size (in terms of revenue, market capitalization) at the time of identification.</p> <p>Stock identification process would include company and business analysis, industry analysis, future plans, projections, technical analysis and valuations. Based on analysis of various financial and non-financial parameters, the stocks will finally be shortlisted for portfolio construction process.</p>
	<p>The Fund Manager of the scheme would also take cues from the global macroeconomic trends, Government policy and monetary policy actions to decide on the asset allocation. The allocations will be within the limits defined in the asset allocation table.</p> <p>Apart from in-house research, external research is used as an important source of information. Various magazines, journals, newspapers and databases also help in the research process.</p> <p>Debt Investment Strategy:</p> <p>The Fund Manager would seek to provide risk adjusted returns by optimizing the tradeoffs between liquidity, duration (interest rate movement), and credit quality, depending on the macro- economic, technical, and market factors including future course of system liquidity, interest rates, and other fiscal and monetary variables..</p>

	<p>The investment strategy starts from analysis, then incorporates limits, looks at portfolio construction and rebalancing, and finally performance monitoring as a feedback loop.</p> <p>The analysis activity starts from macroeconomic analysis, including fiscal and economic factors, impact of global and local events on India's macro-economy, and finally impact of these on the fixed income market. Technical analysis is undertaken as to the likely range of movement, and deciding the timing. Market activity analysis is looked into to determine liquidity of specific securities. Credit analysis and monitoring is resorted to, and dovetailed with the other analysis to determine credit quality, and ideal spreads where specific securities ought to be trading at. This is a continuous process. All this analysis is sieved through limit filters set by the investment committee.</p> <p>Based on these results, portfolio construction and rebalancing is carried out. The performance of the portfolio is continuously monitored, and feedback is taken as to the performance of individual securities to test the assumptions behind the analysis. The assumptions are then tweaked from the learning incorporated by the feedback.</p> <p>Based on this learning, fresh analysis is carried out for portfolio rebalancing, and the process continuously iterates.</p> <p>Portfolio Construction</p> <p>The fund manager has the primary responsibility for portfolio construction based on the investment objective of the Scheme. Every investment decision taken is by keeping in mind the investment objective of the Scheme and how the security will affect the overall portfolio.</p> <p>The Scheme will maintain a well-diversified portfolio focusing on a buy and hold strategy, at most times, as investments in companies need patience for the expected returns to fructify.</p> <p>In addition, the current macro-economic / industry scenario is also monitored and analyzed to assess any impact on the sector and asset allocation decisions of the fund. Technical views which are relevant to asset allocation, if applicable will also be taken into consideration. The focus would be on long term investing driven by fundamental research. However, short-term performance will also be monitored and evaluated.</p>		
Risk Profile of the Scheme	Mutual Fund Units involve Investment risks including the possible loss of principal. Please read the SID carefully for details on risk factors before investment.		
	<p>Scheme specific risk factors</p> <p>Equity and Equity Related Instruments by nature are volatile and prone to price fluctuations on a daily basis due to macro and micro economic factors. The value of Equity and Equity Related Instruments may fluctuate due to factors affecting the securities markets such as price volatility, volumes traded, interest rates, currency exchange rates, changes in law/policies of the Government, taxation laws, political, economic or other developments, which may have an adverse impact on individual securities, a specific sector or all sectors. Consequently, the NAV of the Units issued under the Scheme may be adversely affected.</p> <p>Equity and Equity Related Instruments listed on the stock exchange carry lower liquidity risk; however the Scheme's ability to sell these investments is limited by the overall trading volume on the stock exchanges. In certain cases, settlement periods may be extended significantly by unforeseen circumstances. The inability of the Scheme to make intended securities purchases due to settlement problems could cause the Scheme to miss certain investment opportunities. Similarly, the inability to sell securities held in the Scheme's portfolio may result, at times, in potential losses to the Scheme, if there is a subsequent decline in the value of securities held in the Scheme's portfolio.</p> <p>Investments in equity and equity related instruments involve a degree of risk and investors should not invest in the Scheme unless they can afford to take the risk of losing their investment.</p> <p>The scheme also carries risks associated with investing in debt and money market securities. Investments in debt and money market instruments are subject to interest rate risk, re-investment risk, basis risk, credit risk, spread risk, Liquidity risk, Liquidity Risk on account of unlisted securities, settlement risk etc.</p>		
Risk Management Strategy	The Asset Management Company has incorporated risk management as part of the investment process. The Investment Team has ensured adequate safeguards are taken during the investment and portfolio construction process. The following are the key risks associated with investments in Equity and Equity Related Instruments and the strategy adopted by the AMC in addressing these key risks.

PI refer to SID for details on identification of risks and risk management strategies.</p>	
<p><u>Risks associated with Fixed Income Securities:-</u></p>	
<p><u>Interest Rate Risk</u></p> <p>Fixed income securities such as government bonds, corporate bonds and Money Market Instruments run price-risk or interest-rate risk. Generally, when interest rates rise, prices of existing fixed income securities fall and when interest rates drop, such prices increase. The extent of fall or rise in the prices depends upon the coupon and maturity of the security. It also depends upon the yield level at which the security is being traded.</p>	<p>The modified duration of a portfolio is one of the means of measuring the interest rate risk of the portfolio. Higher is the modified duration, the fund stands exposed to a higher degree of interest rate risk. The Fund Manager would decide on the modified duration to be maintained for the portfolio at a particular point of time after taking into account the current scenario and the investment objective of the scheme. The portfolio duration will be decided after doing a thorough research on the general macroeconomic condition, political environment, systemic liquidity, inflationary expectations, corporate performance and other macroeconomic considerations. The Investment Committee of the AMC would be monitoring the portfolios constantly and would be giving direction regarding portfolio modified duration to the Fund Manager.</p>
<p><u>Credit Risk</u></p> <p>This is the risk associated with the issuer of a debenture/bond or a Money Market Instrument defaulting on coupon payments or in paying back the principal amount on maturity. Even when there is no default, the price of a security may change with expected changes in the credit rating of the issuer. It is to be noted here that a Government Security is a sovereign security and is the safest. Corporate bonds carry a higher amount of credit risk than Government Securities. Within corporate bonds also there are different levels of safety and a bond rated higher by a particular rating agency is safer than a bond rated lower by the same rating agency.</p>	<p>The Investment Team would follow a bottom up approach to create a debt Investment universe. The investment team would carry out rigorous in depth credit evaluation of the money market and debt instruments the scheme proposes to invest in. The credit evaluation will essentially be a bottom up approach and include a study of the operating environment of the issuer, the past track record as well as the future prospects of the issuer and the short term / long term financial health of the issuer. Data from external Credit Rating Agencies like CRISIL, ICRA, FITCH and CARE would be taken into account while constructing this universe. This universe would be constantly monitored by the Investment Committee which would recommend any additions/ deletions from the investment universe.</p>
<p><u>Liquidity Risk</u></p> <p>The liquidity of a bond may change, depending on market conditions leading to changes in the liquidity premium attached to the price of the bond. At the time of selling the security, the security can become illiquid, leading to loss in value of the portfolio.</p>	<p>The Fund Manager would maintain adequate cash/cash equivalent securities to manage the day to day redemptions of the fund. Attention would be given to the historic redemption trends while deciding on the cash equivalent component of the portfolios. Also the Fund Manager and Dealer would be keeping track of various securities being traded in the market and would strive to keep the component of illiquid securities in the portfolio at a low percentage of the total portfolio.</p>
<p>The Investment Committee of the AMC would be acting in a proactive manner to identify and analyze potential risks and act in a preventive manner to contain those risks.</p>
